### DETAILED ACTION

Acknowledgement has been made of the cancellation of claims 2-5, 7-8, and 12-16.

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 6, 9-11, and 17-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cerwin et al. (U.S. Patent No. 4,550,729) in view of Williams (U.S. Patent No. 4,112,944). Cerwin et al. disclose the invention substantially as claimed including a clamp (see Fig. 8) that is capable of being used in surgery, the clamp having a pair of pivotally interconnected arms (ref. 71 and 72, Fig. 8), the arms defining an open v-shaped configuration (see Fig. 8) and a closed configuration where the arms are substantially parallel (see other closed clamp configurations in Fig. 3 and Fig. 6; the clamp of Fig. 8 closes in the same way), each arm having a clamping post, that is perpendicular to the plane of pivotal movement, with a clamping face that is capable of holding tissue (ref. 74 and ref. 75, Fig. 8), the clamping faces being inclined and converging towards the distal tip of the clamping posts (see Fig. 1 below), the clamping faces being of substantially planar form (see Fig. 8), and the clamp being formed by a one-piece plastic molding (col. 4, lines 17-16) where there is a hinge section at the pivot point between the two arms (ref. 73, Fig. 8). Cerwin et al. do not disclose a ratchet

mechanism to hold the clamp in a closed configuration. Williams teaches a ratchet mechanism with ratchet teeth (see ref. 40, 42, 44, and 46) in an arcuate configuration for the purpose of holding a clamp closed. Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to have modified Cerwin et al. with a ratchet mechanism with ratchet teeth in order to hold the clamp in a closed configuration when in use during surgery to clamp a vessel.

Figure 1. Picture showing posts of Cerwin et al. being perpendicular to the plane of pivotal movement.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1, 6, and 9-11 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
